

5. fetch

It is a command utility for unix-like operating system that is used for URL retrieval. It supports a lot of options like fetching ipv4 only address, ipv6 only address, no redirect, exit after successful file retrieval request, retry, etc.

Fetch can be Downloaded and installed from the link below

http://sourceforge.net/projects/fetch/?source=typ_redirect

But before you compile and run it, you should install HTTP Fetcher. Download HTTP Fetcher from the link below.

http://sourceforge.net/projects/http-fetcher/?source=typ_redirect
